

# Your continuous compliance operating system.

Every CEO got AI running.

Nobody protected the data that went with it.

We run the operating system that **finds it AND fixes it.**

**THE AI RUSH**

GPT, Claude, Copilot, Gemini, Perplexity, COMPANY DATA

Files. Deals. Client data.  
Walking out the door.

**THE PROBLEM**

- No log of what was shared
- No alert when it happened
- No way to claw it back
- No audit trail. No record.

**THE ANSWER**

CENTERSKY SECURE · LIVE

TECHNICAL COMPLIANCE  
**62**/100 [FIX →](#)

ACTIVE ALERTS **14** [FIX →](#) OPEN RISKS **7** [FIX →](#)

DEPLOYMENTS · 30D **3** DRIFT ITEMS **54** [FIX →](#)

SOC 2 READINESS  
**46.7**% [FIX →](#)

Every alert has a button.  
Every drift has a fix.  
*Not a report. A workspace.*

AI is just the loudest part of the problem.

We run the operating system that finds it all — and fixes it.

CENTERSKY SECURE

[centersky.net/secure](https://centersky.net/secure) · Learn. Enable. Know.

## THE PROBLEM

# The AI rush didn't create the data exposure problem.

*It just made it impossible to ignore.*

### AI tools are everywhere

Your employees use ChatGPT, Claude, Copilot, Gemini, and Perplexity. With or without your knowledge.

### Data is walking out the door

Files. Deals. Client data. PII. Sensitive documents. Pasted into prompts. No logs. No alerts.

### Most CCOs have zero visibility

What was shared, with which AI tool, by whom, on what date. Currently unknowable.

# Three stages. One outcome.

Learn what you didn't know was there. Enable what needs to be deployed. Know — continuously — what's happening every day.

## 01 LEARN

FREE

**You don't know what you don't know. LEARN does.**

Live, on-screen walkthrough of your M365 tenant against NIST, SOC 2, ISO 27001 baselines. Written assessment + remediation roadmap. Read-only consent — revocable the moment the meeting ends.

*Most clients are surprised. Some are stunned.*

## 02 ENABLE

\$9,000

**Map to SOC 2. Tune to your business. Then deploy.**

Four-phase journey: Preflight (where defaults would pinch) → Deploy (AI deploys in one week) → Post-Launch Review (we come back two weeks later) → Decide (off-switch or continue with KNOW).

*Security that holds. Without breaking how your people actually work.*

## 03 KNOW

FROM \$6,250/MO

**Every alert has a button. Every drift has a fix.**

Continuous compliance operating system. Live scores. Real-time alerts with drift remediation. Action assignment workflow. Quarterly audit-ready evidence pack. Built-in vCISO interface. Not a report. A workspace.

*Finds it AND fixes it.*

# Six things our competitors don't do.

01

## Preflight customization

You tell us where SOC 2 defaults would pinch before we deploy. Most vendors deploy and disappear. We sit with you first.

02

## Post-Launch Review

Two weeks after deployment, we come back to fix what real-world use surfaced. Not an upsell — a phase of ENABLE.

03

## The off-switch

After ENABLE, you decide what comes next. Disconnect cleanly. Keep the configuration we deployed. No lock-in.

04

## License-tier transparency

We tell you exactly what your current Microsoft license lets you achieve. Honest qualification, not a sales hook.

05

## Built for every department

Compliance isn't an IT problem. It's an IT problem AND Legal AND Compliance AND Risk. Each department sees their own action items in one workspace. IT sees technical controls. Legal sees documentation gaps. CISO sees strategic items.

06

## Finds it AND fixes it

Every other compliance product hands you a current-state report. We hand you the buttons to fix what's broken. Not a report. A workspace.

WHO THIS IS FOR

# If you manage other people's data, your cybersecurity posture is already being evaluated.

*By your LPs. By your examiners. By your cyber insurer. By the auditors who'll grade you next quarter. By the AI tools your employees use without your knowledge.*

## FUND SPONSORS

*Opportunity Zone · REIT · Private Equity · Hedge Funds*

A single SEC examination finding tied to cybersecurity can pause fundraising, trigger LP redemptions, and damage your reputation. We give your CCO a live picture of compliance posture and quarterly evidence packs ready for any examiner.

## FAMILY OFFICES

*Single-Family · Multi-Family · Private Wealth Management*

Wire fraud, account takeover, and targeted phishing against principals are the fastest-growing threats. Consumer email offers zero protection. We deploy institutional-grade controls, with isolated principal tenants via Custom Services.

## FINRA / SEC-REGISTERED

*Broker-Dealers · RIAs · Investment Advisers*

Reg S-P, FINRA Rule 4370, and SEC Cybersecurity Risk Management rules require documented continuous evidence — not a policy manual. We produce that evidence automatically every quarter.

**Also built for any compliance-bound organization running Microsoft 365:**

Law firms · Healthcare practices · Regional banks · Defense contractors · Professional services · Accounting firms · Insurance brokerages

## HOW WE WORK TOGETHER

# Compliance is a practice. Not a project.

An effective compliance program requires both parties working in sync. We deliver the technical foundation. You own the organizational layer. The portal connects both — every month, every department, every document, in one place.

### WHAT WE DELIVER

Technical controls deployed and continuously enforced. Real-time monitoring and drift remediation. Quarterly compliance evidence — domain scores, audit trail, action items with owners. The buttons to fix what breaks.

### WHAT YOUR FIRM OWNS

Reviewing and signing off on risk assessments. Maintaining policies and procedures your regulations require. Assigning owners to organizational gaps the portal surfaces. We give you the evidence — you own the program.

**The vCISO interface in KNOW makes the shared work visible to both parties.** Every month of the year, your compliance program is reviewed against the plan — what's been done, what's still owed, which department owns each piece. Progress tracked. Documents requested. Owners assigned.

READY TO START?

# Start with LEARN. It's free.

We scan your M365 environment and walk you through the findings — live, on screen. Written report follows. No cost. No commitment. No IT involvement needed. You see exactly where you stand before spending a dollar.
